

Greening Media Education: Bridging Media Literacy with Green Cultural Citizenship (Minding the Media)

Media are a powerful educational force that teaches about the relationship between humans and living systems while also physiologically impacting the environment. However, although long considered a tool for promoting critical thinking and cultural citizenship, media literacy does not adequately address environmental sustainability. Drawing on original research, Antonio Lopez demonstrates how common media literacy practices reinforce belief systems at the root of unsustainable behaviors. By combining emerging literacies from social media, networked activism, sustainability education, critical media literacy, and digital ecopedagogy, the author offers a solutions-oriented critique and paradigm-shifting reappraisal of media education by advocating ecomedia literacy. This groundbreaking book builds on Lopez's previous two books, *Mediacology* and *The Media Ecosystem*, by offering a cutting-edge and radical reappraisal of conventional media literacy practices. Written in accessible and jargon-free language, this book is ideal for students and educators of media literacy, media studies, and cultural studies, and will also be vital to those advocating sustainability education, environmental studies, and social justice.
