

Hydrographic Data Along the California Coast from Pigeon Point to Cape San Martin, May through July 1996

This is a NAVAL POSTGRADUATE SCHOOL MONTEREY CA report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A266123. The abstract provided by the Pentagon follows: This data report presents hydrographic (CTD) and Acoustic Doppler Current Profiler (ADCP) data collected during a pair of cruises one during May and June the other during July of 1996. The study area encompasses a region from Pigeon Point south to Cape San Martin (35 deg 53N) extending from the coast to approximately 90 km offshore. A total of 163 CTD casts (61 during the first cruise) were completed. The CTD data are presented primarily in tabular form for selected pressures. ADCP data are shown as a set of horizontal contour plots. Some T/S plots are also presented.
