

ARTIFICIAL EYES

This revolutionary and accessible new look on artificial eyes will broaden your understanding of how to solve the millions of fatal eye problems in the world with just a closer look on artificial eyes and its functions compiled by Dr Fred McLaughlin and team. Artificial eyes helps a visually challenged person to live like any other normal person on this planet without any personal guide. This is a piece of device that can be carried. There are multiple different designs and several methods used to help restore sight to those with retinal degenerative diseases. We have seen prosthetics that helped to overcome handicaps. The eye if damaged, biotechnology through human genetic engineering play a vital role in providing visual or ocular prosthesis referred to as artificial eye in replacement of a damaged eye.
