

The Information Society: Evolving Landscapes

UR Reader consists of a set of essays written by international authors many of whom are acknowledged experts in one or more aspects of information technology (IT) and its implications for society. The contents have been influenced by the fact that the relationship between IT and society has to be considered in an holistic context. Our purpose has been to present this series of essays in the loosely related perspectives of landscapes which reflect that holism. As editors, we have chosen to leave people free to select the different perspectives and traverse the landscapes in any manner they choose. The Reader seeks to raise social awareness of the issues at stake when we talk about computers and social accountability and aims to encourage wider discussion of the issues involved. It has a normative set of aims and indicates a determination to explore a possible reshaping and restructuring of information technology according to human needs. In an Epilogue, new pointers are given for action. In what follows, we describe the rationale behind The Information Society: Evolving Landscapes; we move from the conference held at the University of Namur in June, 1988, which shaped the perspectives, then on to the various routes by which the landscapes can be traversed.
