

Managing Hearing Loss in the Home and the Community

Hearing loss can have a huge effect on the individual and also on the people of importance around that individual. Like any loss, the one affected may go through the stage of denial, before accepting that he or she does have a degree of hearing loss. Those closest may find that a once secure relationship seems to be breaking down and knowing how to handle the new relationship seems outside their reach. So, how can this loss be managed? This fifteen-page book looks at the onset of deafness, important points to address to make communication successful, the options of sign language and lipreading and also the support available in the form of interpreters and lipspeakers, hearing aids and technology. This easy to digest book is a must-have tool for family and friends but will also prove to be an excellent guide for professionals who may need to communicate successfully with hearing-impaired people during the working day.
