

## Pornography Use and the Attraction to Sexual Aggression

The influence of pornography on male viewers has been a topic of concern for scientists for the past 4 decades. It has been and continues to be a debated political and legal issue. Research over the last decade has demonstrated that sexual images per se do not facilitate sexual aggression. It is the violent images and early exposure that account for the various research effects. This study recruited fifty-seven volunteers to complete questionnaires regarding attitudes toward sexual thoughts and feelings. The participants reported at what age they began the use of pornographic movies and their frequency of use. This was a real world study in that volunteers were recruited at an adult bookstore and theater. The instrument used was the Attraction to Sexual Aggression scale (Malamuth, 1989). Results indicated that early onset of use was related to higher acceptance of sexual aggression towards women. Frequency of use was not significantly related to attraction to sexual aggression.
