

The Home Health Guide to a Cancer Free Family

A complete family manual which describes in a clear and practical way how to achieve a healthy and enjoyable lifestyle, which at the same time reduces the chances of developing cancer. It shows how cancer or a precancerous condition can be detected early and cured and provides preventive advice for the main cancer risks of inheritance, smoking, diet, alcohol, sun exposure, physical inactivity, sexual practices and carcinogens at work, at home and in the environment. Recommendations are then made for the prevention and early detection of cancers of the colon, rectum, breasts, lung, prostate, skin (including melanoma), cervix, uterus and ovary, as well as 18 less common cancers. Finally, a unique, comprehensive, personal plan is presented to significantly reduce the cancer risk.
